DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The prior art fails to disclose or render obvious the claimed combination including: a diesel nozzle-and- holder assembly, the nozzle comprising: a nozzle body chamber, a sac below the nozzle body chamber, an opened centered body seat, an annular notch extending from a first point in the body seat, the notch having a lowest wall that is at a given angle-to-vertical where the lowest wall approaches the second point, and the given angle-to-vertical of said lowest notch wall where it approaches said second point is reduced to less than 60° , whereby sac cross-sectional areas that would have been bounded in part by a lowest notch wall having an angle-to-vertical of 60° , and all parts of the cross-sectional area of the sac, would have relatively great sweep area radii with reference to the nozzle's central axis, stand eliminated, and the percentage of reduction of sac volume that is incident to such angle reduction is higher than the percentage by which sweep area is reduced.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to show the art with respect to a fuel injector: Zeuch et al., Parrish, Jr., and Golev et al.
